DARE TO CARE NEOINNOVATE SimMeet

High Fidelity Medical Simulation Workshop

Objectives of workshop

Simulation-based medical training (SBMT) is a powerful tool for continuing medical education that allows individuals to learn and practice real life clinical scenarios in an accurate, realistic, safe and secure environment with close interaction.

Neonatal intensive care simulation involves critical scenarios, resuscitation scenarios, procedural skills, teamwork and human factors training. We are aiming to provide a feel of close to real life clinical scenarios encountered in NICU in a SIMLUTATED environment. All simulations will be video-recorded to allow mentees to learn from their own performance during simulation debriefing.

Learning will be focussed on various aspect in the team such as close loops communication, clear leadership and role clarity, voicing concerns, sharing information within the team and regular re-evaluation. At the end of high intense training over the day the participants would be able to improve understanding, knowledge and confidence to effectively respond to any critical scenario while working as close team.
